JOHN XIANG RHONG SOH

SOFTWARE ENGINEER

PROFILE INFO

Sr. Full Stack AI Engineer with 7+ years of experience, including 1.5 years specializing in AI agent development. I've shipped production AI Agents using LangChain, RAG, and OpenAI APIs, and I'm currently building AdAgent, an autonomous system that takes a site URL, generates ad creatives, launches Meta campaigns, and auto-scales spend in real time. My DevRel background keeps me grounded in what makes products actually usable.

CONTACT INFO

Address
7702 Libretto Ln, Austin, Texas, 78744

MY SKILLS

AI/Agents: LangChain, RAG, OpenAI API, n8n, Openclaw, Google ADK
Core Engineering: Python, TypeScript, Node.js, Java, REST APIs, Docker.
Frontend: React, Angular.
Databases: PostgreSQL (Supabase), Pinecone, MongoDB

WORK EXPERIENCE

Sr AI Engineer **Dec 2024 - Present**
Virtuals Protocol - Remote, US

- Built and deployed AI agents end to end including autonomous outreach agents and dev assistants using LangChain, OpenAI and Python
- Developed AI tools to provide scalable technical support, reducing manual overhead for the DevRel team
- Collaborated across teams to prototype and ship new products from 0 to 1
- Contributed to open-source tools and documentation to support agent building and deployment
- Delivered talks and created content on agent design, prompt engineering, and multi-agent workflows
- Built and supported a developer community around AI agent development and the Agent Commerce Protocol (ACP)

Software Engineer **Jan 2018 - Dec 2024**
Veritas Technologies LLC - Roseville, MN

- Spearheaded the development of innovative features for the recently launched web application dedicated to NetBackup software.
- Applied advanced skills in JavaScript and Angular to craft an intuitive and user-friendly interface, enhancing overall user experience.
- Took the lead on smaller-scale sub-projects, fostering collaboration with Project Managers, UX designers, and backend engineers to ensure the seamless delivery of features.
- Design, develop and maintained robust RESTful APIs to support the functionality and connectivity of the application.

EDUCATION HISTORY

Bachelor in Computer Science **2014-2017**
University of Minnesota, Twin Cities

LANGUAGE

Fluent in English, Chinese, Malay and Cantonese.

CERTIFICATION

Google Cybersecurity Professional Certification

PROJECTS

AdAgent Labs
Virtuals Protocol | 2026

- Built an end-to-end AI agent pipeline where a user inputs their website URL and the system autonomously generates ad creatives, copy, and campaign strategy using LLMs
- Integrated the Meta Ads API to programmatically launch campaigns and rotate creative variants in real time without manual intervention
- Engineered auto-scaling logic that monitors live performance signals and dynamically adjusts ad spend and targeting, wrapped in a full-stack dashboard with agent reasoning traces

RAG-Powered Telegram Support Assistant
Virtuals Protocol | 2025

- Built an end-to-end RAG system combining semantic search and LLM-powered responses to deliver intelligent, context-aware support through a Telegram bot
- Engineered the vector retrieval pipeline with hybrid search, blending semantic similarity and keyword matching across indexed documentation for high accuracy
- Shipped to production serving real users at under 2 seconds response latency, with full state management and error recovery for concurrent conversations

Agent Evaluator System for Commerce Transactions
Virtuals Protocol | 2024

- Built an autonomous AI evaluator agent that assesses transactions between buyer and seller agents, ensuring quality and compliance within the Agent-to-Commerce Protocol
- Engineered a multi-modal evaluation pipeline processing images, videos, documents, and structured data to validate deliverables against transaction requirements
- Deployed in production handling automated quality assurance for agent-to-agent commerce, meaningfully reducing manual review overhead and improving transaction reliability
