JOHN XIANG RHONG SOH

SOFTWARE ENGINEER

PROFILE INFO

Senior DevRel Engineer at Virtuals Protocol with 7 years of software engineering experience. Skilled in building developer communities, driving adoption, and translating feedback into product improvements. Combines full-stack expertise with clear communication to bridge developers and engineering teams.

Address
7702 Libretto Ln, Austin, Texas, 78744

MY SKILLS

AI/Agents: LangChain, RAG, OpenAI API, Vector DBs (Supabase/Pinecone), n8n, Python, Openclaw
Core Engineering: TypeScript, Node.js, Java, REST APIs, Docker.
Frontend: React, Angular, Cypress

WORK EXPERIENCE

Sr DevRel Engineer **Dec 2024 - Present**
Virtuals Protocol - Remote, US

- Built and supported a developer community around AI agent development and the Agent-to-Commerce Protocol (ACP).
- Led three hackathons to showcase the Virtuals SDK and onboard developers with real-world use cases.
- Developed AI tools to assist DevRel team in providing scalable technical support to external developer teams.
- Contributed to open-source tools and documentation to support agent building and deployment.
- Collaborated across teams to prototype AI agents, including autonomous outreach and dev assistants.
- Delivered talks and created content on agent design, prompt engineering, and multi-agent workflows.

Software Engineer **Jan 2018 - Dec 2024**
Veritas Technologies LLC - Roseville, MN

- Spearheaded the development of innovative features for the recently launched web application dedicated to NetBackup software.
- Applied advanced skills in JavaScript and Angular to craft an intuitive and user-friendly interface, enhancing overall user experience.
- Wrote and maintained Cypress end-to-end test suites to validate UI functionality and catch regressions in the NetBackup web application
- Design, develop and maintained robust RESTful APIs to support the functionality and connectivity of the application.

EDUCATION HISTORY

Bachelor in Computer Science **2014-2017**
University of Minnesota, Twin Cities

LANGUAGE

Fluent in English, Chinese, Malay and Cantonese.

CERTIFICATION

Google Cybersecurity Professional Certification

PROJECTS

AdAgent Labs
Virtuals Protocol | 2026

- Built an end-to-end AI agent pipeline that takes a user's website URL, uses Playwright to scrape site content and branding, then autonomously generates ad creatives, copy, and campaign strategy using LLMs
- Integrated the Meta Ads API to programmatically launch campaigns and rotate creative variants in real time without manual intervention
- Engineered auto-scaling logic that monitors live performance signals and dynamically adjusts ad spend and targeting, wrapped in a full-stack dashboard with agent reasoning traces

RAG-Powered Telegram Support Assistant
Virtuals Protocol | 2025

- Built an end-to-end RAG system combining semantic search and LLM-powered responses to deliver intelligent, context-aware support through a Telegram bot
- Engineered the vector retrieval pipeline with hybrid search, blending semantic similarity and keyword matching across indexed documentation for high accuracy
- Shipped to production serving real users at under 2 seconds response latency, with full state management and error recovery for concurrent conversations

Agent Evaluator System for Commerce Transactions
Virtuals Protocol | 2024

- Built an autonomous AI evaluator agent that assesses transactions between buyer and seller agents, ensuring quality and compliance within the Agent-to-Commerce Protocol
- Engineered a multi-modal evaluation pipeline processing images, videos, documents, and structured data to validate deliverables against transaction requirements
- Deployed in production handling automated quality assurance for agent-to-agent commerce, meaningfully reducing manual review overhead and improving transaction reliability
