JOHN XIANG RHONG SOH

SOLUTIONS ENGINEER

612-707-5058 | jsoh0118@gmail.com | Austin, TX 78744

PROFILE

Solutions Engineer with 7+ years of software engineering experience spanning technical customer enablement, developer relations, and AI systems delivery. Skilled at translating complex technical capabilities into clear customer value, from building demos and proofs of concept to shaping integrations, and then turning field feedback into product improvements. Combines full-stack engineering depth with strong communication to bridge customers, developers, and internal engineering teams.

WORK EXPERIENCE

Solutions EngineerDec 2024 - Present

Virtuals Protocol | Remote, US

- Acted as the primary technical point of contact for a developer/partner ecosystem building on the Agent-to-Commerce Protocol (ACP), providing hands-on integration support, technical troubleshooting, and solution design guidance.
- Designed and delivered technical demos, workshops, and three hackathons showcasing the Virtuals SDK, driving onboarding and adoption of real-world use cases among prospective and existing developer partners.
- Built and deployed custom AI tools, including a RAG-based support assistant and automated evaluation agents, to scale technical support delivery and cut response time for external teams.
- Partnered with product and engineering teams to translate customer and developer feedback into requirements, closing the loop between field needs and the product roadmap.
- Prototyped and shipped proof-of-concept AI agents, including autonomous outreach agents and developer assistants, in cross-functional collaboration, using working demos to validate solution feasibility with stakeholders.
- Created technical content and delivered talks on agent architecture, prompt engineering, and multi-agent workflows to support partner enablement and self-service adoption.

Software EngineerJan 2018 - Dec 2024

Veritas Technologies LLC | Roseville, MN

- Partnered directly with Project Managers, UX designers, and backend engineers to translate customer and stakeholder requirements into shipped features for a newly launched NetBackup web application.
- Designed, built, and maintained RESTful APIs that enabled reliable third-party and internal integrations, supporting the application's core functionality and connectivity.
- Owned smaller-scale sub-projects end-to-end, from requirements gathering through delivery, coordinating across multiple functions to hit deadlines.
- Applied JavaScript and Angular expertise to design intuitive, user-friendly interfaces that reduced friction and improved the overall customer experience.

SELECTED TECHNICAL PROJECTS

RAG-Powered Telegram Support Assistant, Virtuals Protocol | 2025

- Built and deployed an end-to-end RAG support system combining semantic search and LLM-generated responses to give developers instant, context-aware answers via a Telegram bot, reducing manual support load.
- Engineered a hybrid vector retrieval pipeline (semantic and keyword search) over product documentation to maximize answer accuracy, a pattern reusable for customer-facing knowledge bases.
- Shipped to production serving real users at sub-2-second response latency, with state management and error recovery for concurrent conversations.

Agent Evaluator System for Commerce Transactions, Virtuals Protocol | 2024

- Built an autonomous evaluator agent that validates transactions between buyer and seller agents against configurable quality and compliance rules. This solution-design pattern applies directly to automated QA for customer workflows.
- Engineered a multi-modal evaluation pipeline (images, video, documents, structured data) to validate deliverables, deployed in production to reduce manual review overhead.

AdAgent Labs, Virtuals Protocol | 2026

- Built a self-serve, end-to-end agent pipeline where a user submits a website URL and the system autonomously generates ad creatives, copy, and campaign strategy, demonstrating rapid solution prototyping from customer input to working product.
- Integrated the Meta Ads API to launch campaigns and rotate creative variants automatically, wrapped in a full-stack dashboard with transparent agent reasoning traces for stakeholder trust.

SKILLS

Customer-Facing: Technical Demos & POCs, Developer/Partner Enablement, Technical Support & Troubleshooting, Solution Design, Cross-Functional Collaboration, Technical Writing & Presenting

AI / Agents: LangChain, RAG, OpenAI API, Vector DBs (Supabase, Pinecone), n8n, Google ADK

Core Engineering: Python, TypeScript, Node.js, Java, REST APIs, Docker

Frontend: React, Angular

Databases: PostgreSQL (Supabase), Pinecone, MongoDB

EDUCATION & CERTIFICATION

Bachelor in Computer Science, University of Minnesota, Twin Cities2014 - 2017
Google Cybersecurity Professional Certification

LANGUAGES

Fluent in English, Chinese, Malay, and Cantonese.
